AUTOMATIC ROTARY LIQUID FILLING AND CAPPING MACHINES

Rotary filling and capping machines are fully automatic Monoblock machines with mechanical sorter cap feeding systems. They are designed for higher production speeds, where bottles are directed to filling and capping stations by star wheels.

They can be operated efficiently and economically without need for highly skilled operators thanks to their ergonomic design and automation; operation and maintenance are very easy.

Technical Features

- 12 nozzles
- Filling speeds up to 3000 bottles per hour
- Star wheel system with volumetric filling
- Viton piston seals
- Steel construction with powder paint coating
- 8 mm plexiglass cabin
- Adjustable speed
- Touch screen microprocessor control
- Wide range of liquid products (fluid, semi-fluid)
